Dermal Fillers

Information for Patients

Dermal fillers are natural products that can be used to smooth out deeper lines caused by the constant attack of the sun, pollution, fatigue, hormone changes and the natural ageing process. As time goes on, the amount of hyaluronic acid in our skin decreases which leads to loss of volume and hydration.

Dermal Fillers are containing of stabilized hyaluronic acid. Replacing this lost hyaluronic acid helps rehydrate the skin from within, restoring lost volume, improving elasticity, skin tone and smoothing facial lines. Hyaluronic acid is a non-animal product and patch testing is not required.

What are the benefits of treatment?

Dermal Fillers are used most commonly to smooth nose to mouth lines and to enhance the lips, but can be used to treat most lines and wrinkles.

What happens during the procedure?

After facial analysis and treatment consultation, the gel is injected into the skin using a very fine needle, giving immediate results. Treatment time is approximately thirty minutes.

What are the possible side effects?

After treatment there may be some bruising, redness and swelling, which rarely lasts more than a few days. Local anaesthetic may be used to minimize any discomfort at the site of treatment.

How long will the effects it last?

Hyaluronic acid is a natural product and will, through time be completely broken down. Facial lines generally show improvement for 9-12 months.
